Roll no. : T010	Name : Sagar kandari
Class : TYIT	Batch : 1
Date of assignment : 05/08/2026	Date of assignment : 05/08/2026

1 A Create a Jira Cloud account and explore the dashboard. Jira is a project management and work-tracking tool used to organize and monitor project activities. It allows users to create projects, manage tasks, track their progress, and collaborate with team members. Jira provides different options according to the type of work being performed. During the initial setup, the user selects the type of work, such as project management, so that Jira can provide suitable templates and features.

A project/space in Jira acts as a common workspace where related work is organized. It contains the tasks, boards, team members, and other project-related information. Jira also provides a Dashboard, which gives users an overview of their work and provides access to their projects and other Jira features. Open Google and search for Jira. Open the Jira website to begin the setup.

Do this later

[Go to Jira](#)

After completing the setup, the Jira Dashboard will appear. The dashboard provides access to your projects and work.

1 b Practical 1B - Create a Company-managed Scrum/Kanban Project. Kanban is a visual method of managing and tracking work. In Jira, a Kanban board represents work using cards and columns. Each card represents a task or work item . The columns represent different stages of the work. A task can be moved from one column to another as its status changes. For example: To Do → In Progress → Done The Kanban template provides a ready-made structure for managing work instead of creating the complete workflow manually. Jira also allows users to add team members to a space.

This enables multiple people to participate in the same project and collaborate on its tasks. From the Jira navigation menu, click Spaces (+) to create or access a space.

Select the Kanban template to create a Kanban-based project. And create a project this space will appear

1c

Prac 1C - Configure project details Space Settings provides options for viewing and managing the configuration of a Jira space. After creating a space, users can open Space Settings to access information and configuration options related to that space.

The Details section provides basic information about the space. It helps users identify and understand the configuration of the created space. Space settings are important because they provide a central location for managing different aspects of the project. Open the created Jira space/project from the navigation menu.

Submit the in the space settings in jira
